

Module 2

Task 4: AI Tool Landscape Annotation

Task 4: AI Tool Landscape Annotation [15 min]

Purpose	Create a personally annotated, role-specific map of generative AI tools organized by modality, access status, and institutional fit — a working reference you will update throughout the workshop.
----------------	--

Click to expand the text box

Step-by-step instructions:

1. Open the Module 2 AI Tool Landscape Map from course resources (a visual grid of tools by modality: text, image, code, audio, multimodal).
2. Select 4 tools from the map that are most relevant to your role — at least one from a modality other than text.
3. For each selected tool, complete one row in the annotation table below.
4. For Access Status: check your institution's IT/software portal before marking 'No Access' — many universities have enterprise agreements not widely advertised.
5. Save or print your annotated map — you will update it in Module 3 after completing Task 1's Workflow Audit.

Tool Annotation Table:

AI Tools & Platforms
