A	The History of the Olympic Games The modern Olympic Games were revived in 1900 in Paris, France, largely through the efforts of French educator Pierre de Coubertin, who believed sport could promote international peace and understanding. The first modern Games featured 14 nations and approximately 250 athletes competing in events including athletics, cycling, and swimming. Women were not permitted to compete until the 1920 Antwerp Games, when they were first allowed to participate in select events. The Olympic motto, Citius, Altius, Fortius — meaning "Faster, Higher, Stronger" — was adopted at the inaugural modern Games.		N		Factual	Low (or medium?)

		A Dates	FALSE - Year wrong - revivals of the Olympic Movement and the first modern Olympics in Athens in 1896 [2 sources]	Yoav Dubinsky Physical Culture and Sport. Studies and Research, 2019, 84, 27-40 DOI: 10.2478/pcssr-2019-0024 https://www.olympics.com/ioc/faq/history-and-origin-of-the-games/when-did-women-first-compete-in-the-olympic-games		
		A Names				
		A Stats	FALSE - Women competed for the first time at the 1900 Games in Paris 14 nations true	https://www.olympics.com/ioc/news/athens-1896-the-revival-of-the-olympic-games		
		A Causal Relations hips

		A Institutional Facts	FALSE The second modern	https://www.olympics.com/ioc/faq/history-and-origin-of-the-games/when-did-women-first-compete-in-the-olympic-games		

			Olympics were held in Paris in 1900 (not 1st)			
B	The Human Body and Sleep Sleep researchers have established that adults require between 7 and 9 hours of sleep per night for optimal cognitive function. During sleep, the brain enters a phase called rapid eye movement (REM) sleep, during which the sleep body repairs muscle tissue and releases growth hormone — making REM the most physically restorative stage of the cycle. Chronic sleep deprivation of fewer than 6 hours per night has been linked to increased risk of cardiovascular disease, obesity, and impaired immune response. The average adult takes approximately 7 minutes to fall asleep under normal conditions.		N		Factual - Low

C	The Amazon Rainforest The Amazon rainforest spans approximately 5.5 million square kilometers across nine South American countries , making it the largest tropical rainforest on Earth. Scientists estimate it contains over 400 billion individual trees representing more than 16,000 species. A 2019 report by the World Wildlife Fund found that 30% of the Amazon had been deforested since systematic monitoring began in 1970, raising urgent concerns about its long-term viability as a carbon sink. The Amazon River itself discharges approximately 20% of all fresh water that flows into the world's oceans.

D	Marie Curie Marie Curie was a Polish-born physicist and chemist who conducted pioneering research on radioactivity — a term she herself coined. She was the first woman to win a Nobel Prize, receiving the Nobel Prize in Chemistry in 1903 for her discovery of polonium and radium. She later became the first person to win Nobel Prizes in two different sciences , receiving a second Nobel Prize in Physics in 1911 . Curie was also the first woman appointed as a professor at the University of Warsaw , where she taught for most of her career.

E	The Internet and the World Wide Web The Internet and the World Wide Web are the same technology, developed together in the late 1980s by British computer scientist Tim Berners-Lee working at CERN in Switzerland. Berners-Lee designed the system to allow military and government networks to survive a nuclear attack by routing data through multiple pathways — a design goal that explains why the web has no central server. By 1995, an estimated 50 million people worldwide were using the web for communication and information sharing, representing rapid adoption unprecedented in the history of communications technology. 	E	Institutional Facts	TRUE - Tim Berners-Lee, a British scientist, invented the World Wide Web (WWW) in 1989, while working at CERN. FALSE 20 to 30 million computers around the world were connected to the Internet in the mid-1990's.	https://home.cern/science/computing/the-birth-of-the-web/short-history-web/ https://www.ebsco.com/research-starters/history/rise-internet-and-world-wide-web		
	Hallucination type (Severity)					
	Extrinsic/Statistical (High severity)					

	An extrinsic hallucination (high severity);					
	and an extrinsic hallucination (low severity)					
	Factual (Low–Medium severity)					
	A factual hallucination (medium severity);					
	and a temporal hallucination (medium severity)					
	Relational/Causal (Medium severity)					
	A relational/causal hallucination (medium severity);					
	and an extrinsic hallucination (low severity)					
	Intrinsic (High severity)					
	An intrinsic hallucination (high severity);					
	a relational hallucination (medium severity)					
	Temporal + Factual (Medium severity)					
	A factual hallucination (medium severity);					

	and a factual hallucination (medium severity)					
			* Severity guidance: Low = minor factual imprecision (wrong middle initial, slightly wrong year) with no consequential effect; Medium = an error that could mislead a practitioner making routine decisions; High = an error that could influence a consequent			

		ial institutiona l decision (admission s, research design, policy).				
	2. After completing all five, calculate your detection rate: claims correctly identified as errors ÷ total actual errors (from answer key).					
	3. Write 2–3 sentences on: What type of hallucination was hardest to detect, and why?					
			9 false			
			1 - unsure			

			The hardest to detect hallucinations are the external hallucinations when verbiage sounds plausible and may be surrounded by factual information. The ones with dates and terns are similar are also hard to detect without consulting multiple sources to check credibility.
