

Module 2

Key terms — write your own definition after reading:

Term	Your definition (in your own words)
Chain-of-thought prompting	CoT prompting is a method where you guide the AI model to complete a task involving multistep reasoning and show its work to verify how the answer was derived.
Zero-shot prompting	Tell the AI system specific and clear instruction without providing an example of how to complete the task
Few-shot prompting	Tell the AI system what you are seeking and provide a few examples to increase the odds you will get a correct response with fewer errors
Reasoning chain	The AI model is provided a prompt to include Let's think step by step in the prompt
Emergent ability	The capability of a model to perform a task that it was not specifically trained to do. An increase in parameters and scale allows for emergence

Key terms — write your own definition after reading:

Term	Your definition (in your own words)
Hallucinations (NLG)	Nonsensical output that is generated but not faithful to the input
Intrinsic hallucination	Output contradicts the input or source content
Extrinsic hallucination	Output that cannot be confirmed or contradicted by the provided source. The output cannot be verified as being wrong or verified by the source
Faithfulness	Staying true to the sources
Factually grounding	Being based on fact
